Why is my account disabled when I try to log into Angel?

Some users will log into Angel successfully (their password is accepted), but their account will show up as disabled.

Students' Angel accounts are only activated when they are registered for a class or have been automatically enrolled in a placement exam. Students who have either not registered for classes or do not have to take any placement exams online will have their accounts disabled. If a student has registered for a class, his/her account will usually be enabled within 24 hours (it is currently not instantaneous). If a student needs to take a placement exam online but still shows up as disabled, then an administrator will have to review the issue.
