General

What Scantron services do you offer and how can I use them?

IT maintains a ScanMark 2250 optical mark reader as a data entry tool along with a PC running Windows 2000 and several customized software packages.

Faculty Support
Faculty who wish to grade multiple choice exams can use this setup. The ParScore software allows an instructor to set up a roster for his class at the beginning of the term and maintain records of all exams and quizzes. Item analyses and other statistics can be extracted.

Freshman Placement Testing
Freshman placement testing is done before the beginning of the fall and spring semesters. Exams are scored using the ScanMark 2250 and results are processed using SPSS statistical package to place the students in the appropriate math, communications and chemistry courses.

Faculty Evaluations
Faculty evaluations are done at the end of each term and are processed using the ScanMark 2250.

Survey and Research Support
Using a software package called ScanBook, form definitions can be created to process other types of forms. Thus we can offer assistance in the processing of survey data for research projects. If you are using a custom form you should contact Technology Support Services well in advance of ordering or using the forms to avoid unforeseen problems and delays.

It is very important that we discuss the project and select the appropriate form before the project begins. Contact Technology Support Services to arrange Scantron services.
